

The screenshot shows a Jupyter Notebook interface with a dark theme. The browser tabs at the top include 'Python - Remove List Items', 'numpy/numpy: The fundamen...', and 'Untitled0.ipynb - Colab'. The address bar shows a Google Drive link. The notebook has a menu bar with 'File', 'Edit', 'View', 'Insert', 'Runtime', 'Tools', and 'Help'. Below the menu is a toolbar with 'Commands', '+ Code', '+ Text', and 'Run all'. On the left is a sidebar with icons for file management. The main area contains a code cell with the title 'Assignment - 03 (1st February 2026)'. The code defines a function 'is_palindrome(n)' that checks if a number is a palindrome using a while loop. It also prints the results for 1234 and 121. The output shows 'False' for 1234 and 'True' for 121. The bottom status bar shows 'Variables', 'Terminal', '8:21PM', and 'Python 3'.

```
def is_palindrome(n):
    num = n
    result = 0

    while num > 0:
        ld = num % 10
        result = (result * 10) + ld
        num = num // 10

    return n == result

print(is_palindrome(1234))
print(is_palindrome(121))
```

False
True

The screenshot shows the same Jupyter Notebook interface. The code cell now contains a single line of code: 'n = 25' followed by 'print("Even" if n % 2 == 0 else "Odd")'. The output shows '... Odd'. The rest of the interface, including the browser tabs, menu bar, and sidebar, remains the same.

```
n = 25
print("Even" if n % 2 == 0 else "Odd")
```

... Odd

Assignment - 03 (1st February 2026)

1. Whether a number is palindrome

2. Whether a number is odd / even

3. Find out the prime factors of a number

[3]
✓ 0s

```
n = 36
i = 2
print("Prime factors:")
while i <= n:
    if n % i == 0:
        print(i)
        n //= i
    else:
        i += 1
```

Prime factors:
